After several years of development KINEMATICA succeeded in introducing to the market an extremely efficient powder dispersing machine with the series MEGATRON MT-VPC / VPR.

Advantages of the newly developed system patented are above all, that due to a strongly improved suction capacity unwanted lumps can be avoided during powder sucking and wetting. This averts, for one thing, a plugging of the powder supply line and improves at the same time the homogeneous dispersing.

The generated high vacuum with a simultaneous high suction capacity is substantially independent of the liquid throughput and to a certain extent, also independent of the pressure at the outlet. This grants a dust-free incorporation into the liquid. It has been shown that the generatable suction capacity is sufficiently high that heavy powders, e.g. metal containing powders, can also be sucked in.

The new MEGATRON MT-VPC / VPR powder dispersing machine with its convective powder wetting system and a wide range of various dispersing generators substantially increases the number of application in the field of chemistry, pharma and food.

The series includes at present various sizes with a throughput related to water and depending on the dispersing generator used from approx. 1'000 l/h to 70'000 l/h.

<b>MT-VP 160</b>	25'000 l/h	1'200 kg/h	25 m/s	3'000 rpm	160 mm	up to 37.0 kW

The market of foamed products in the field of chemistry, pharma and food has heavily increased over the last few years. This not least because through the foaming process various product features can be adapted easier to modern trends and the quality and life time has considerably increased.

In collaboration with ETH Zürich KINEMATICA has brought to the market a new generation of foam processors with the series of MEGATRON® FM.

The striking feature of this series is the generation of smallest micro bubbles in the scale of 5 - 10 µm and its narrow distribution due to a brandnew rotor stator geometry.

The extremely effective foam processor MEGATRON® FM works constantly and is available in different versions for laboratory and pilot plant size for product and recipe development with a few liters throughput and in various sizes/performances for the production up to several 1000 liters throughput considering different working and environmental conditions.

We are happy to provide you with professional advice and to offer you all desirable accessories e.g. metering pumps with premixing container and mixer, cooling aggregate, process control.

Some typical applications in food are:

- foamed protein
- foamed dairy products
- foamed ice cream
- mousse-products
- foamed confectionary
- bread pastries
- foamed filling products
- and many more

- MEGATRON® MT-FM series are axial flow through dispersing machines without pumping effects
- MT-FM series are specially designed for gas dispersions with bubble sizes < 20 mm at an optimum of homogenization
- Overruns up to several 100% are possible depending on the product
- Pressure up to 10 bar standard, higher possible
- Temperature up to 95 °C standard, higher possible
- Viscosity aqueous up to paste-like
- MT-FM series can also be used very successfully for intensive mixing / homogenizing of emulsions and suspensions

KINEMATICA offers also a range of complete homogenizing and mixing plants for different applications in the chemical, pharmaceutical, cosmetic and food industry - known under the brand name REACTRON®.

REACTRON® systems are designed to customers' specifications and consist normally of the following components: processing tank with POLYMIX® stirring system for macro mixing, POLYTRON® / MEGATRON® homogenizing system for down sizing and micro mixing, piping, process control and further specific equipment like vacuum pumps, heating / cooling thermostats.

REACTRON® systems are available for batch and semi-batch operation with volumes starting with 1 liter up to several 100 liters. They can be designed and manufactured according to customer and application specifications, incl. pressure / vacuum, CIP / SIP, clean room design and ATEX regulations.

Some application examples:

- Producing of creams, lotions, emulsions
- Pharmaceutical or cosmetic products
- Dispersing of fine solids into a liquid or molten phase
- Suspending of additives and solid polymers in mineral oils
- Producing of dairy products and diet food
- Polymerisations
- Extracting of enzymes from bio masses
- and many more
